Re: Upper Columbia River sampling, northeast WA

Dear Mr. Walters:

As you may be aware, the U.S. Environmental Protection Agency (EPA) is conducting a sampling site investigation (SI) of the Upper Columbia River in northeast Washington. The purpose of this letter is to provide additional information regarding EPA's on-going assessment of the Upper Columbia River and a brief description of field activities planned for this year.

In May/June of this year, sediment samples will be collected from the northern reach of the Upper Columbia River beginning at Inchelium, WA extending northward to the US-Canada border. EPA also plans to visit a number of mines and mills located within the Upper Columbia River drainage area this Summer. The purpose of which is to help identify potential contaminant sources to the Upper Columbia River.

Based on a search of property ownership, the mines and mills to be visited are situated on either federally-owned or private property. A preliminary list of mines and mills that appear to be situated on federally-owned property is provided in Enclosure 1. A list of mines and mills for which we are currently verifying ownership is included in Enclosure 2. Please be assured that EPA contractor personnel will coordinate field activities with the appropriate federal agency staff.

The sampling SI is a screening step that will help determine whether further detailed investigation or action by EPA or others is needed. Further information regarding EPA's assessment activities is provided in the enclosed Fact Sheet. Should you have any questions, please feel free to contact me at (206) 553-0323.

Sincerely,

Monica Tonel

Monica Tonel
Site Assessment Manager
